ABOUT

Full stack engineer with 4+ years shipping TypeScript products, from a business-critical lending platform at Banco Santander to a generative-AI assistant for a private-equity client. Outside work I found and run my own AI products end to end — MotorSportive, an autonomous multi-agent F1 newsroom, is the largest. I want to work on agentic AI systems that reach real users.

EXPERIENCE

1YR 8 MOS

Santander

Full Time · Hybrid · Málaga, Spain

MAR 2025 – PRESENT

Full Stack Developer

Santander Global Tech

- Build Banco Santander's internal **wholesale lending platform** on DLX (Digital Loan Exchange), which runs the **full lifecycle of syndicated and corporate loans** — a business-critical system for the bank.
- **Own the business-logic layer in TypeScript**: modelling facilities, tranches, contracts and participants, and extending the DLX SDK with custom validations, conditions and workflows.
- Turn **legal and operational requirements into production logic**, working directly with lending, legal and operations stakeholders.
- **Automate repetitive back-office processes** and handle complex lending scenarios: syndication structures, participant distribution, financial events and the contractual audit trail.

Nfq Advisory, Solutions, Outsourcing

Full Time · Hybrid · Madrid, Spain

FEB 2024 – FEB 2025

Frontend Developer

Permira - GAIA

- Built **GAIA, a generative-AI assistant** for private-equity firm Permira: **RAG over a vector knowledge base** of confidential documents, a chat that accepts images and files, and a PDF viewer with AI summaries.
- **Migrated the frontend to Next.js with server-side rendering**, cutting load times in virtualised desktops and on low-powered devices.
- **Redesigned the interface** with Tailwind and Zustand, removing redundant code and improving navigation and accessibility.
- Integrated **Okta SSO** for enterprise authentication and **worked on the Python backend** to keep the frontend-backend contract fast and stable.
- Worked in English with the **UK-based client** in an agile team (sprints, stand-ups, retrospectives).

FEB 2023 – FEB 2024

Frontend Developer

Solutions

- Developed four B2B products for NFQ Solutions: **TRAFIS, SZENA, ALQUID and NETZERO**.
- **Led the frontend logic** of these apps in Vue.js/Vuex and React, becoming the go-to person for how they worked.
- Built **internal component libraries** with Vuetify, designed with the team for reuse across products.

- Kept the codebase **clean and modular** with clear separation of responsibilities and shared mixins.

JAN 2022 – FEB 2023

Full Stack Developer

Graphenus

- Delivered features **end to end**: Angular frontend (services, routing, Angular Material) and **Node.js/Express backend** with REST APIs and JWT auth.
- Integrated **PostgreSQL and MongoDB** behind the API layer.
- **Containerised deployments with Docker** across environments, with Git/GitLab version control.
- Documented the project processes and conventions the team worked by.

MY PRODUCTS

MotorSportive ↗

Founder. Autonomous AI newsroom for Formula 1: an editor agent assigns stories to AI journalists with their own voice, a pipeline publishes every 15 minutes and posts to social media, with human oversight from an admin console. Next.js, Cloudflare Workers, Firestore, Stripe.

MeshMind ↗

Visual builder for AI flows that run on your own GPU, in the browser: text, image and voice nodes, MCP tools and a tool-calling agent.

Fainancial ↗

AI analysis of earnings-call transcripts and market data, with watchlists, paid plans and a market assistant.

Baitme ↗

Tests a YouTube thumbnail inside real search results and gets an AI art director’s critique.

Escudo Leal JPT ↗
